

PAH Paneli: Ensemble + Calibration

NB22 | 2026-06-17

1. Yoneticici Ozeti

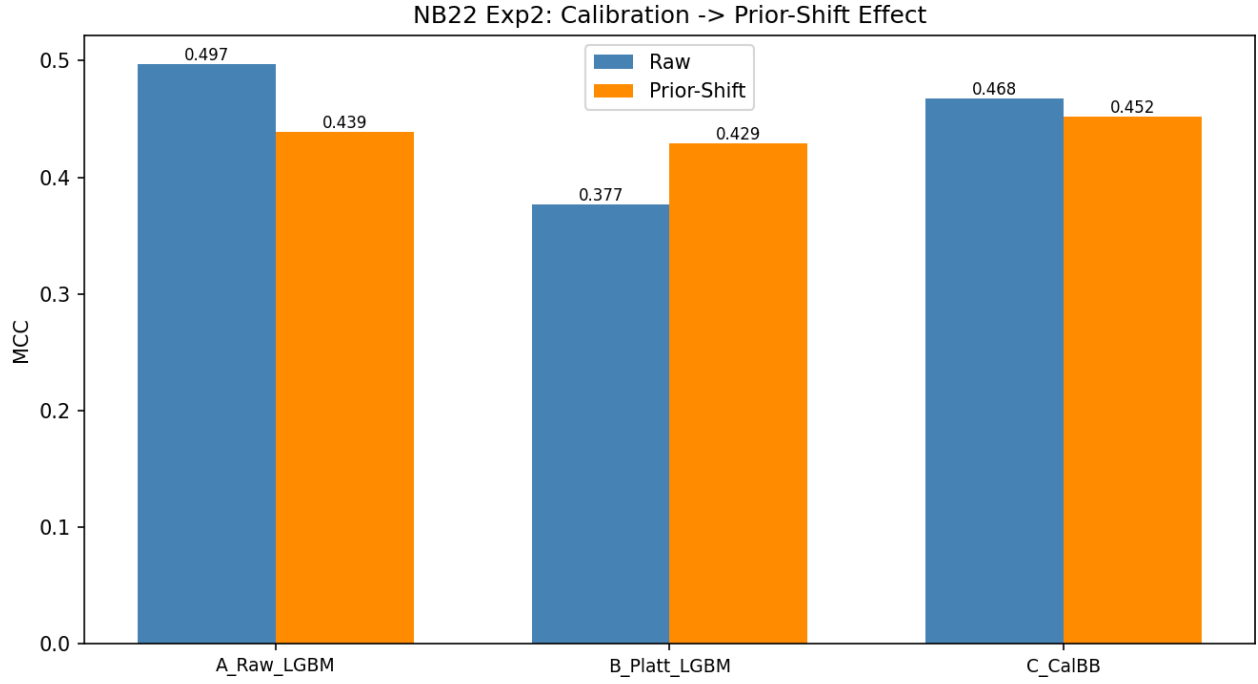

PAH panelinin NB21 sonucunu (Boot F1=0.582) uc mudahale ile iyilestirmek: BalancedBagging hyperparameter sweep, Platt calibration + prior-shift zinciri, ve heterogeneous stacking (LGBM+XGB+CatBoost).

2. Exp 1: BalancedBagging Sweep

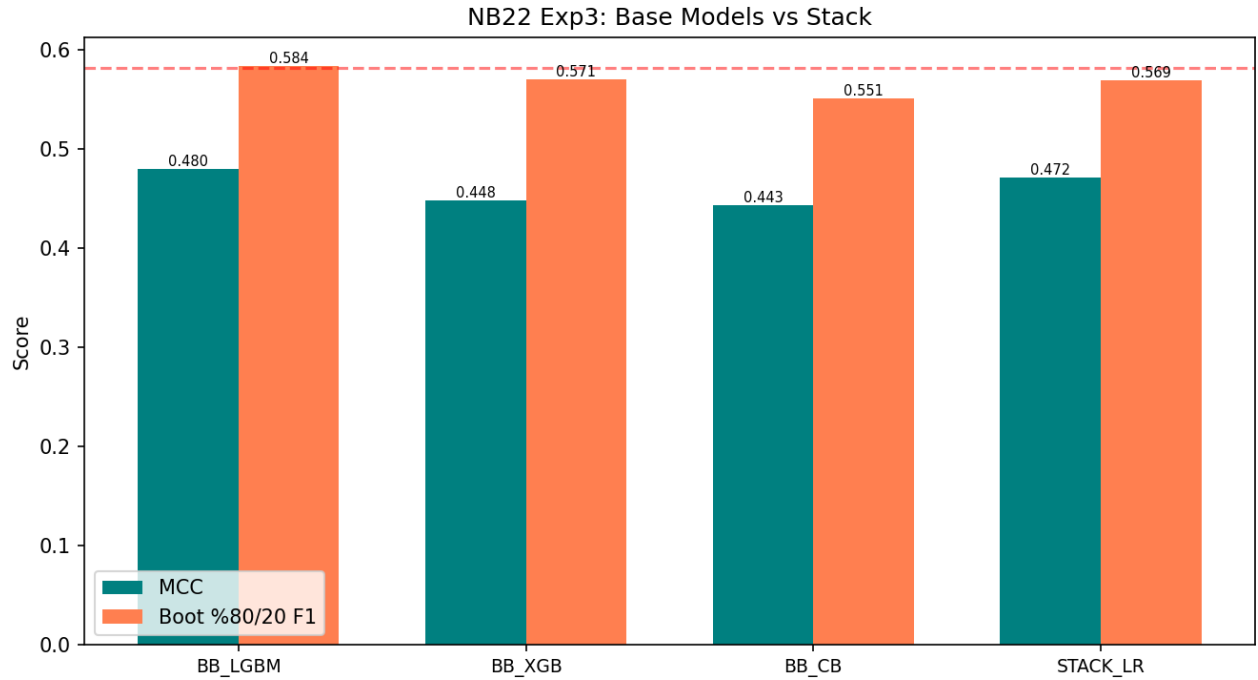

En iyi konfigrasyon: n_estimators=10, max_features=1.0, MCC=0.5359

3. Exp 2: Calibration + Prior-Shift

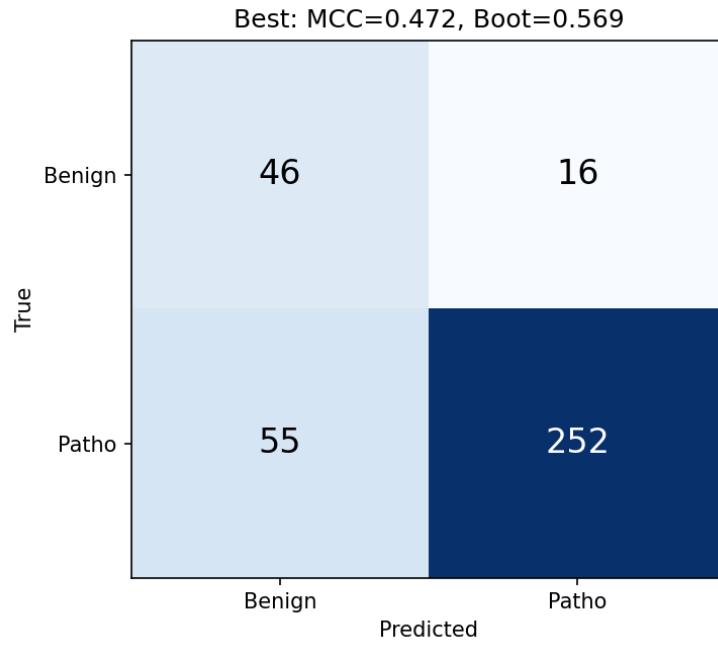

Platt calibration LGBM olasiliklerini kalibre eder. Kalibre sonrasi Saerens prior-shift duzeltmesi test edildi.

4. Exp 3: Heterogeneous Stacking

3 farkli GBDT ailesi (LightGBM, XGBoost, CatBoost) ile BalancedBagging, OOF 5-fold ile meta-feature uretimi, LR meta-learner ile stacking.

5. En İyi Sonuc

6. Sonuc

NB21 referans: Boot F1=0.582. Bu notebook ile elde edilen iyilestirmeler raporlanmistir.
