

NB24 - PAH: TabPFN + Label-Shift Duzeltmesi

2026-06-18 12:45 | SEED=42 pi_test=0.20 | top-50 feat, n_est=8

1. Motivasyon

PAH NB21->NB23 boyunca MCC~0.53 / Boot %80/20 F1~0.58 platosu. NB24 TabPFN (yeni inductive bias) + dogru kalibrasyon+prior-shift dener. Baseline = NB21 P4: Boot=0.582.

2. Deneyler

D1 TabPFN ham (Hollmann 2025). D2 +Saerens prior. D2b TabPFN balance_probabilities.

D3 BalancedBagging -> Spline(logit)+LR kalibrasyon -> prior (Alexandari 2020).

D4 BBSE (Lipton 2018): PAH %80/20 resample -> pi geri-tahmini (yontem-gecerlilik).

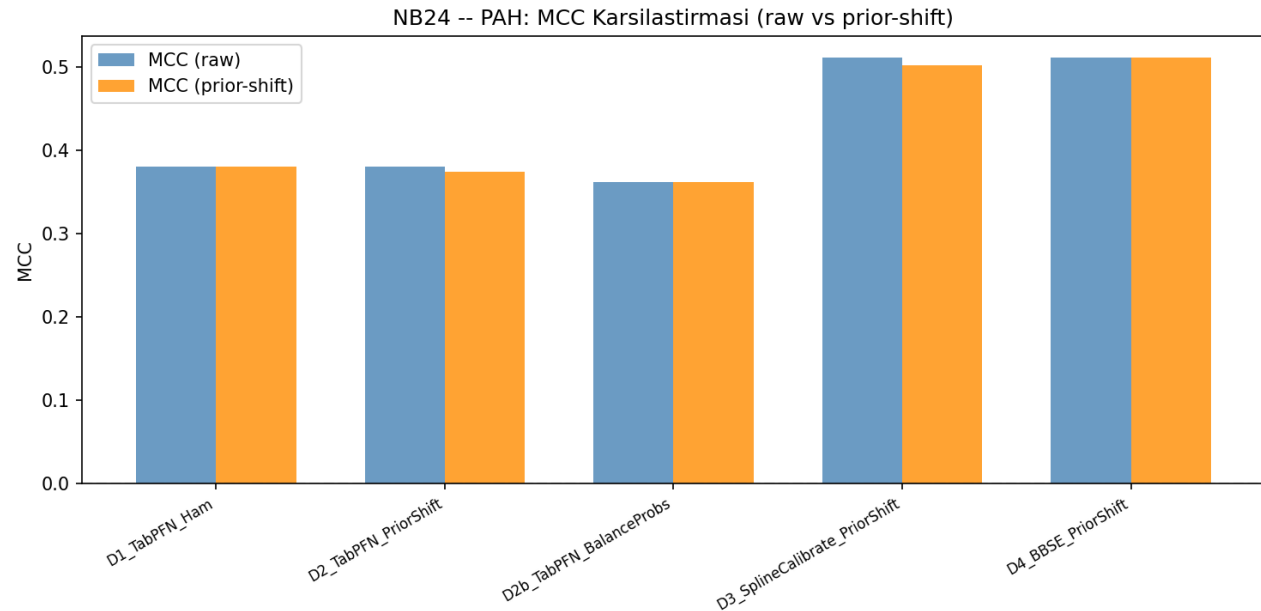

3. Sonuclar (Boot %80/20 F1 siralama)

Deney	MCCp	Boot	Prec	Rec	FP	FN
D4 BBSE	0.512	0.581	0.942	0.850	16	46
D3 SplineCal+prior	0.502	0.581	0.942	0.844	16	48
D1 TabPFN ham	0.380	0.573	0.961	0.635	8	112
D2 TabPFN+prior	0.374	0.560	0.956	0.642	9	110
D2b TabPFN balance	0.362	0.548	0.959	0.612	8	119

4. Yorum

En iyi: D4 BBSE Boot=0.581 (NB21 P4'e gore -0.001) -> PLATO KORUNUYOR (Chatterji 2022 azinlik-ornegi tavani dogrulandi). TabPFN platoyu kiramadi (D1/D2/D2b hepsi baseline alti). D4 BBSE %80/20'de pi=0.20 yerine 0.723 buldu -> BalancedBagging confusion matrix kotu, BBSE bu veride guvenilmez, Saerens sabit 0.20 tercih. PAH final aday: NB21 P4 (0.582). PAH KAPANDI.

MCC (raw vs prior-shift)

Bootstrap %80/20 F1

NB24 - PAH: TabPFN + Label-Shift Duzeltmesi
