

NB32: KANSER Training Pool Sweep

Tarih: 2026-06-23 12:46

Bu rapor, KANSER paneli için 7 farklı model tipi x 10 farklı training pool varyasyonunu sistematik olarak test eder. NB31'deki finetune implementasyon hataları düzeltilmiş, NB16'nin kanıtlanmış `_train_es` reçetesi tüm NN/DNN modellere uygulanmıştır.

Baseline: NB31 E6_alpha_0.5 Boot-F1 = 0.7201

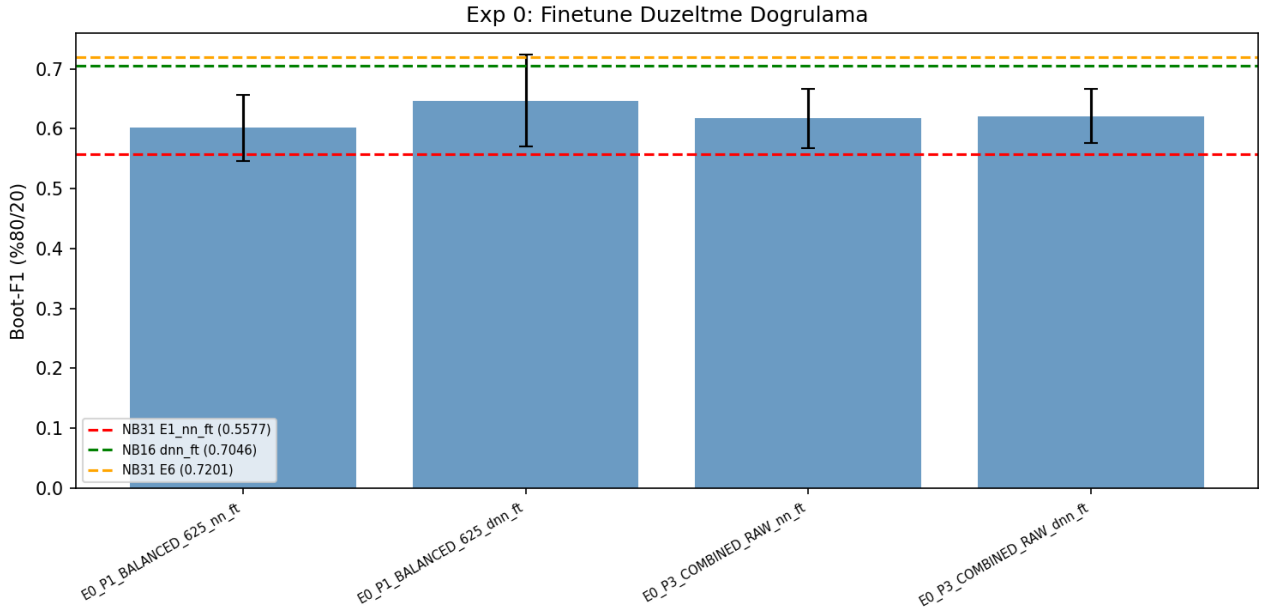

Toplam deney sayısı: 84

1. Exp 0: Finetune Duzeltme Dogrulama

NB31'deki 4 implementasyon hatasi duzeltildi:

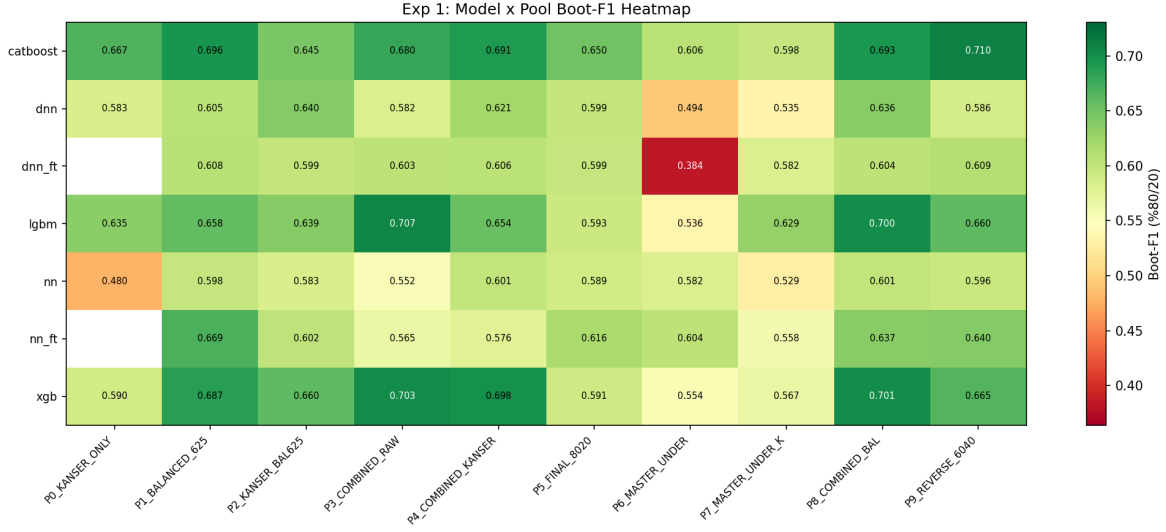

- 1) Layer freeze: Sadece son layer -> Tum katmanlar lr=1e-4
- 2) Scaler: Her fold yeni -> Birlesik basis (pretrain+panel)
- 3) Early stopping: Loss-based -> F1-based
- 4) weight_decay: 1e-4 -> 1e-3, pos_weight eklendi

Deney	Boot-F1	Std	AUPRC	FP	FN
E0_P1_BALANCED_625_dnn_ft	0.6468	0.077	0.9339	7	41

E0_P3_COMBINED_RAW_nn_ft	0.6176	0.049	0.9043	13	22

2. Exp 1: Training Pool x Model Sweep

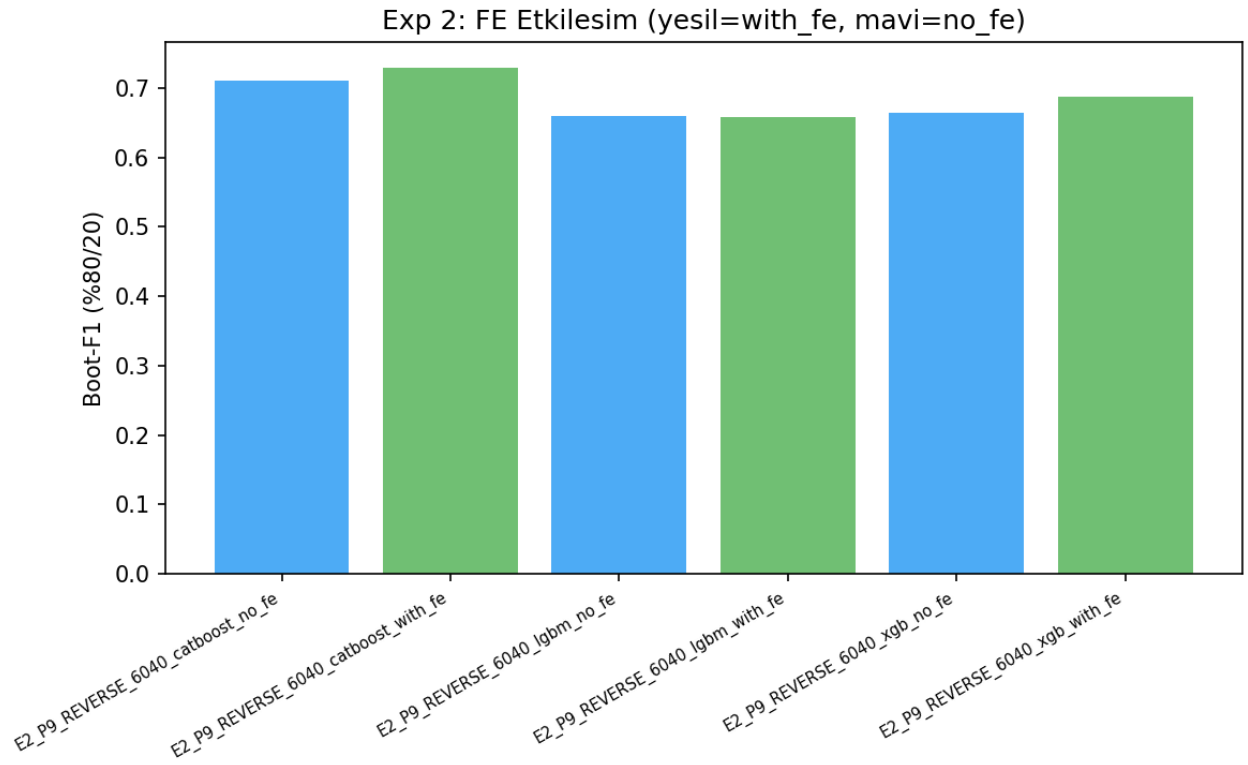

7 model tipi (LGBM, XGB, CatBoost, SmallMLP, DeepMLP, NN_ft, DNN_ft) x 10 training pool varyasyonu test edildi.
